PROFESSIONAL SUMMARY

MS in Business Analytics & AI candidate at UT Dallas with experience in data analysis, business intelligence, and operations automation. Built production-grade ML systems, automated financial reporting pipelines, and Power BI dashboards used in live business decisions. Proficient in SQL, Python, Power BI, Tableau, and Excel; experienced translating large operational datasets into stakeholder-ready insights across retail, food manufacturing, and higher education environments.

EDUCATION

MS, Business Analytics & Artificial Intelligence The University of Texas at Dallas GPA: 3.44/4.0 Relevant Coursework: Data Analytics, Advanced Statistics, A/B Testing, Applied Econometrics, Operations Management	Expected May 2027
BS, Business Administration (Hons.) - Finance Christ University, Bangalore, India	May 2025

TECHNICAL SKILLS & CERTIFICATIONS

Query & Programming: SQL (Joins, CTEs, Window Functions, Stored Procedures), Python (Pandas, NumPy, Scikit-learn), R
BI & Visualization: Power BI (DAX), Tableau, Excel (PivotTables, Power Query, VBA), Power Automate
Analytics Methods: Forecasting & Regression Modeling, Pricing Analysis, SKU-Level Analysis, KPI Dashboard Development, ETL & Data Cleaning, Reporting Automation, Trend Analysis, Process Improvement, A/B Testing, Anomaly Detection, Statistical Hypothesis Testing, Machine Learning (XGBoost, Random Forest, Isolation Forest), Demand Forecasting
Business & Operations: Financial & Operational Reporting, Pricing Operations Support, Cross-Functional Coordination, Root-Cause Analysis, Reconciliations, Stakeholder Communication, Data Storytelling, Project Tracking
Certifications: Data Science & Business Analytics (Univ. of Maryland) | Power BI (Udemy) | Tableau Desktop Specialist | Economics & Sustainability (Wayland Baptist)

PROFESSIONAL EXPERIENCE

Operations Analyst Intern The Chicago School - Lead process discovery and automation initiatives across 5+ university departments, scoping inefficiencies and deploying Power Automate and Power Apps solutions that reduce manual task volume by an estimated 20–35% - Engineer end-to-end automated workflows replacing high-frequency manual processes - including form routing, approval chains, and data handoffs - improving reporting accuracy and freeing 5–10 hours/week of staff capacity per department - Build Power BI dashboards tracking KPIs and solution impact metrics for senior leadership, enabling data-driven evaluation of ongoing process improvement initiatives across a fully remote university environment - Deliver structured process documentation and SOPs for 5+ operational functions, reducing onboarding ambiguity and establishing repeatable workflow standards that improve cross-departmental consistency	Jun 2026 – Present
Business Analyst JityAI - Analyzed 10,000+ SKU-level pricing, sales, and inventory records for retail clients, identifying demand patterns and pricing gaps that informed product setup, inventory allocation, and replenishment decisions - Built and validated regression and time-series forecasting models in Python (Pandas, Scikit-learn), improving demand forecast accuracy by 15–20% and reducing planning errors across client product lines - Designed Power BI and Tableau dashboards integrating SKU-level pricing, sales velocity, and inventory data, replacing ad hoc spreadsheet reviews with structured stakeholder-ready reporting used in weekly business reviews	Jan 2025 – Aug 2025
Operations & Business Analyst Harsiddhi Foods Pvt. Ltd., India - Queried and analyzed 20,000+ procurement, production, and export records in SQL and Excel, surfacing supplier pricing gaps and cost variances that directly informed sourcing decisions and operational reviews - Built a regression-based demand forecasting model trained on 12 months of sales and procurement data, improving inventory planning accuracy by 15% and reducing overstock and stockout risk - Developed Power BI dashboards tracking cost drivers, contribution margins, and supply chain KPIs - replacing manual Excel reviews and giving leadership real-time visibility into product-level and operational performance - Automated vendor payment and AR reconciliation workflows using Excel Power Query and VBA, cutting monthly close cycle time by 25% and eliminating manual errors across finance and operations teams	Apr 2025 – Jul 2025

ANALYTICS PROJECTS

ML-Powered Warehouse Operations Decision System Python, SQL, R, SHAP, Power Automate - Built a production ML decision system on 53,000 warehouse records using Random Forest ($R^2=0.934$, 91.7% risk classification accuracy), Facebook Prophet for 30-day demand forecasting, and XGBoost for disruption risk scoring - backed by a normalized 5-table MySQL schema - Applied SHAP explainability to quantify disruption cost at \$2,286/hour and confirm an 89% morning-vs-night throughput gap via 6 statistical hypothesis tests in R; delivered staffing and SLA recommendations projecting \$840K+ in annual savings
FP&A AI Analyst Agent Python, SQL, Streamlit, Scikit-learn, Groq API - Engineered an end-to-end FP&A automation pipeline replacing 2–5 days of manual variance analysis with a sub-2-minute workflow - using a SQLite CTE-based variance engine with full outer join emulation to prevent budget-only row loss; deployed live on Streamlit Cloud. - Detected 41 anomalies across 408 financial records using Isolation Forest with adaptive contamination scaling; integrated Groq LLM to auto-generate board-ready management commentary with rule-based fallback; shipped with 15-test validation suite covering variance math and data integrity.
